

Local Land Charges external release notice

Release number 8.3
Release Date: 28/09/2022

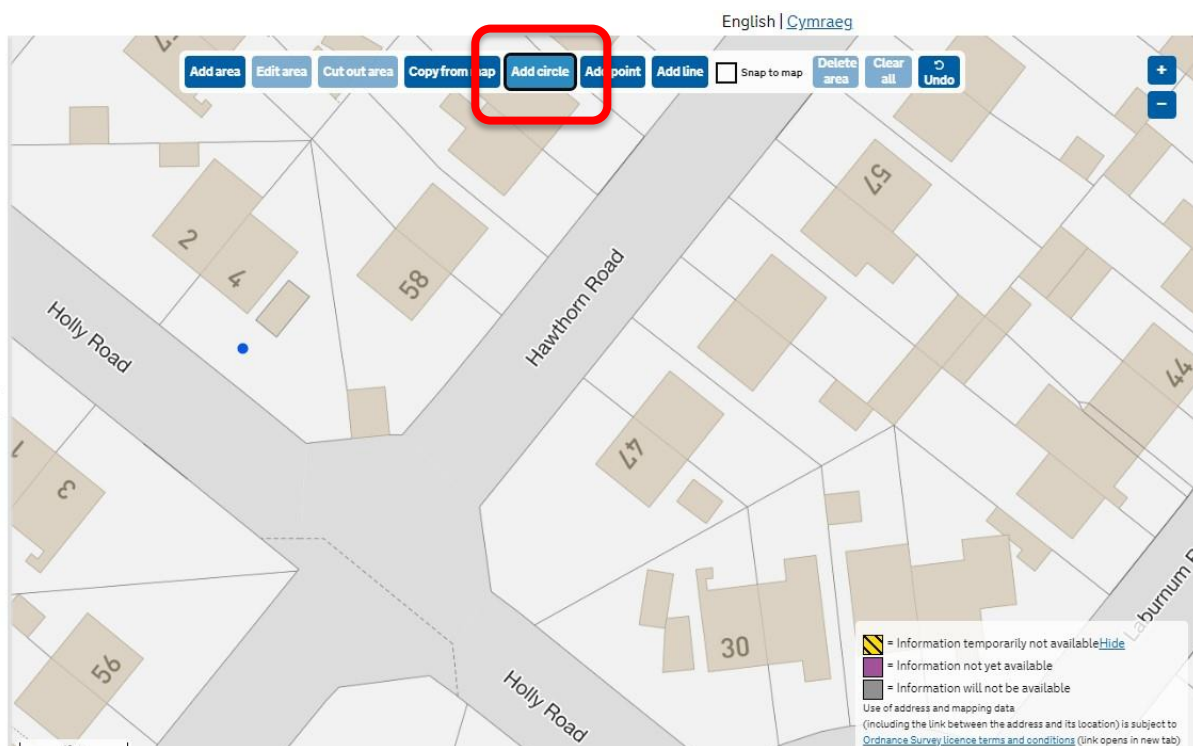

Service: Maintain local land charges

Map Enhancements

- **Introduce 'draw circle' tool in Maintain**

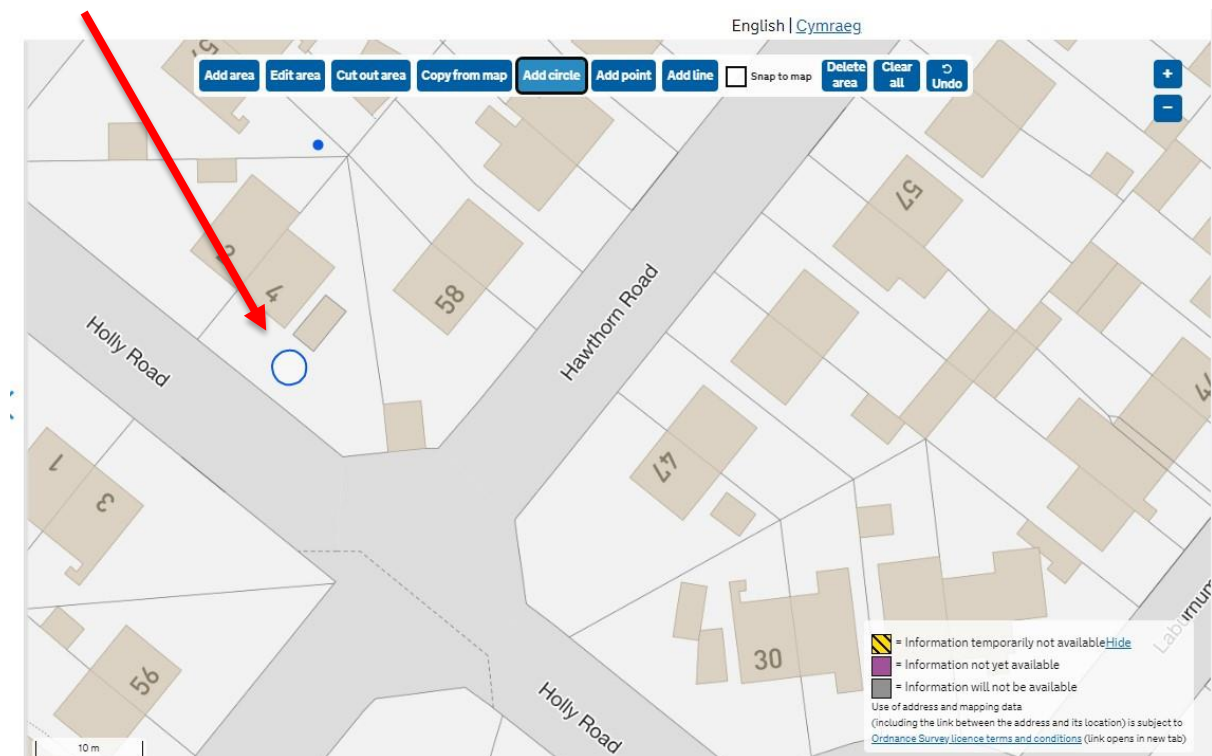

This new tool allows circles to be drawn with a variable radius.

User selects new 'Add Circle' button, then clicks on a point on the map;

User then moves the mouse to determine the circle radius

Clicking the left mouse button again completes the circle

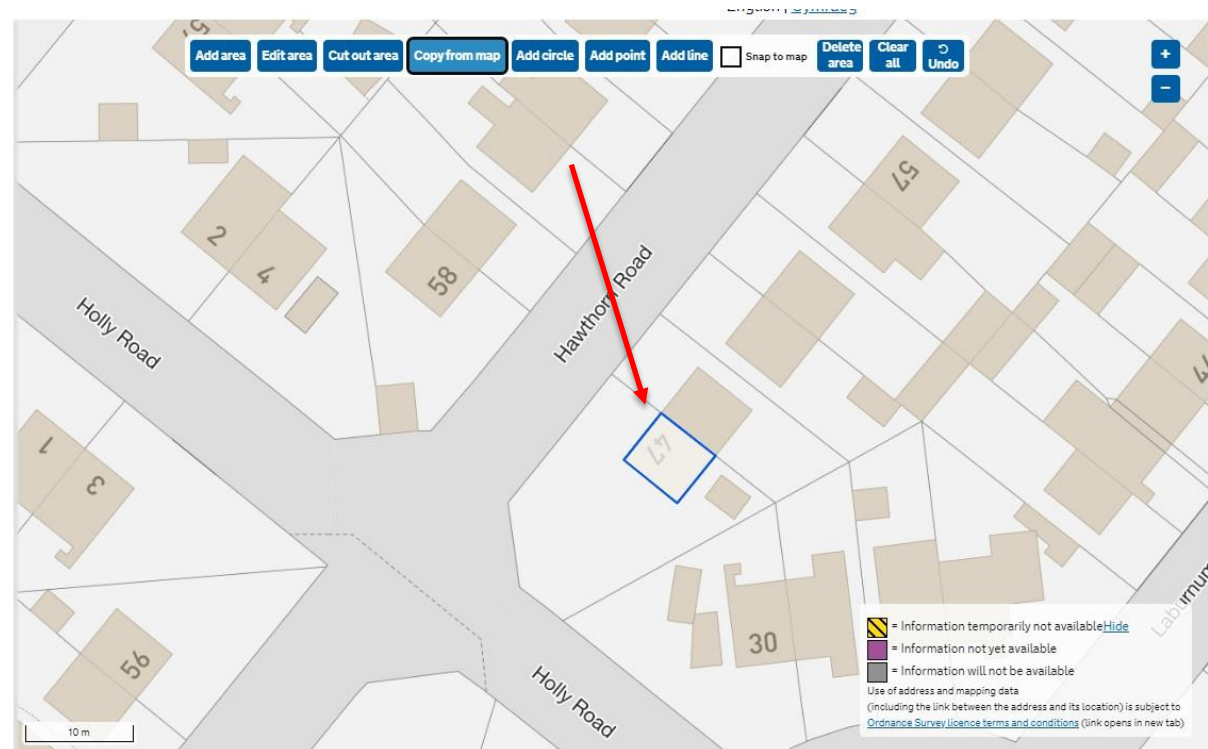

- **Enhance 'copy from map' function in Maintain**

This function will now capture areas other than simple buildings. Where multiple, adjoining areas are selected, they will be merged automatically. This should make capturing certain extents much quicker than plotting point by point.

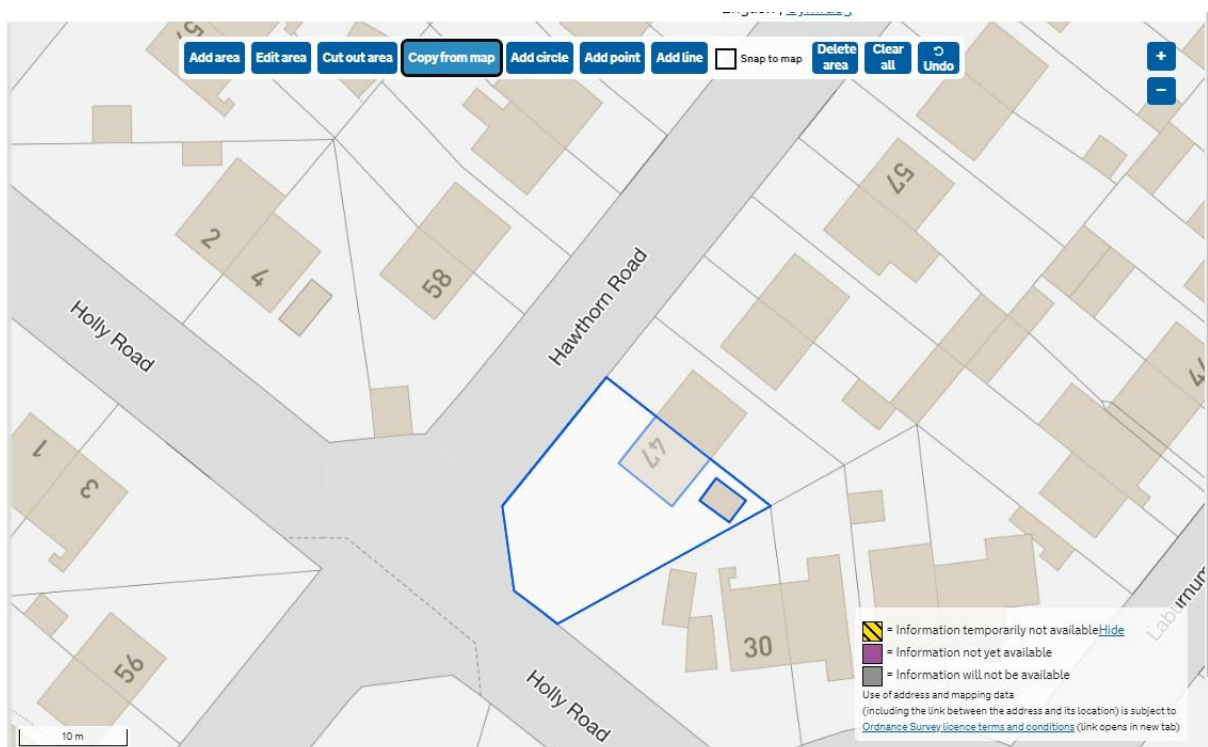

User clicks to capture the building:

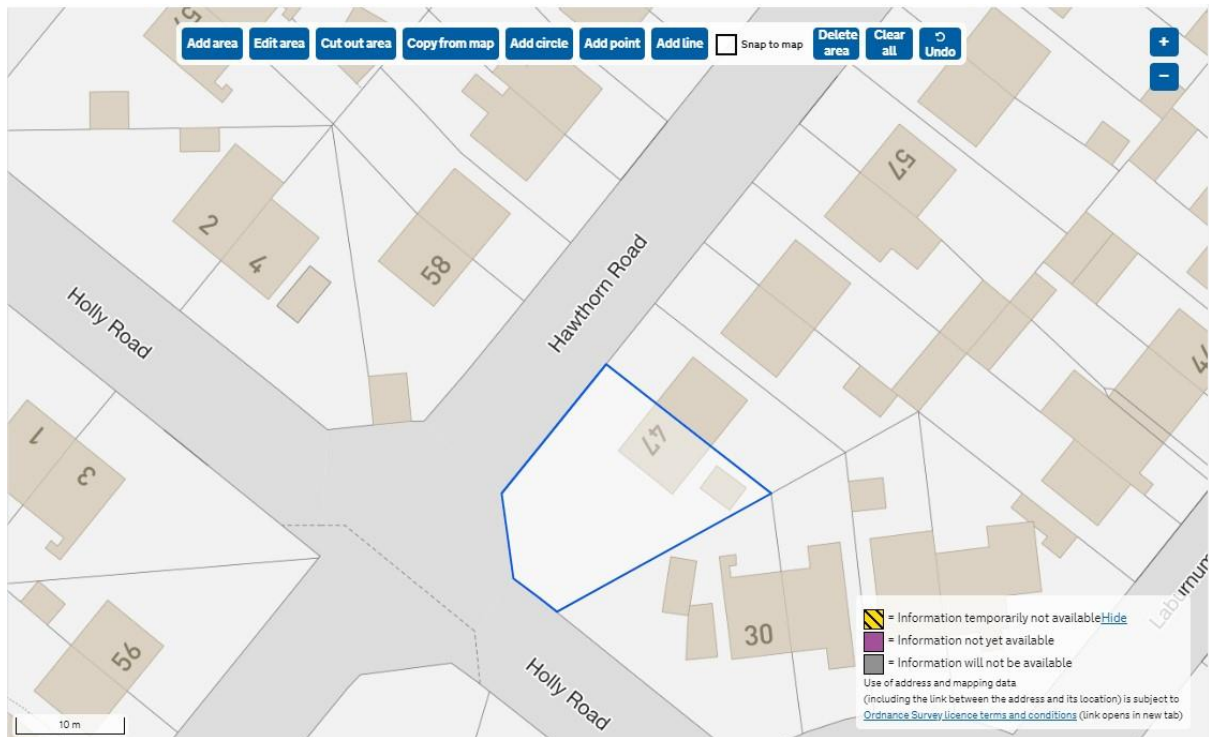

OFFICIAL

User Captures the broader, fenced extent:

User finally clicks on the garage. The polygons are merged into a single geometry automatically:

- ***Remove feature limit from 'snap to'***

This enhancement should result in greater accuracy when 'snapping to' particular points on the map; and make it's behaviour more consistent between Adding and Editing charges.
