

Local Land Charges External release notice

Release number 8.4

Release Date: 26/10/2022

Service: Maintain interface users and API-enabled authorities

Enhancements

- *Completely (not partly) overlapping points and polygons associated with a single charge are merged automatically when submitted for registration (when adding or varying a charge)*
- *Should completely identical polygons associated with a single charge be submitted for registration, they will also be merged*

Note: This change applies to updates made via the API and via the Maintain user interface. It will help prevent inadvertent errors in plotting.

Note: This does not apply retrospectively to existing registrations, only new additions or variations.
