Local Land Charges external release notice

Release number 7.2
Release Date: 23/2/2022

Service: Maintain local land charges

Enhancements

- *New user groups added: API authority user and API authority admin.*

  - *These new groups are effectively external read-only accounts, which allow access to find charges and view the expired charges report, but which do not allow register data to be updated.*

  - *It is anticipated that most new API-enabled local authority users will be set up with these accounts, to prevent data sync issues arising.*

  - *Existing API-enabled local authority users will not automatically be switched over to the new accounts; you should have a conversation with your SPI team contact to agree the most appropriate kind of account for you.*

- *Warning messages added to add, vary and cancel charge flows when a user organisation is identified as api-enabled.*

  - *These warning messages will not prevent register updates being made, but will remind users that if they proceed it may result in data sync issues, depending on how you usually add or update charges.*

Fixes:

- *Update LON charge 'contact' us url*
